

This path-breaking institute is already transforming the landscape of our sciences by training the next generation in the next big ideas and cutting-edge research methods.

**Susan T. Fiske**Eugene Higgins Professor of Psychology
Princeton University

The Summer Institute is a remarkable opportunity for young scientists to train in cultural neuroscience, but also to develop as the new leaders of this emergent field. The confluence of disciplines and methodologies presented by the world's leading

scientists from so many domains in an ambient but intense environment makes this an unmatched training experience.

**Denise C. Park**Distinguished University Chair
University of Texas at Dallas

Important new developments in science often involve the synthesis of existing fields. Cultural differences and biological unity have often been contrasted, but in the new Summer Institute in Cultural Neuroscience the two are being brought

together by the world's leading researchers to provide an enhanced perspective appropriate to a globalized world. Attendance at the Institute on Cultural Neuroscience allows students to learn how to employ the tools of neuroscience to explore the various cultures that occupy our diverse world.

**Michael I. Posner**Professor Emeritus, University of Oregon

## The 3rd Summer Institute In Cultural Neuroscience

July 9-20, 2012

Shinobu Kitayama Director of CCMB

We invite you to apply to attend the third annual Summer Institute in Cultural Neuroscience at the University of Michigan in Ann Arbor. SICN is a two-week program that provides graduate students as well as faculty with an overview of core topics and recent research developments related to cultural neuroscience in order to prepare them to start their own empirical investigations. Attendees will have an opportunity to develop their own research ideas in cultural neuroscience through interactions with peers and faculty members.

SICN lectures on culture, brain, or both will be delivered by world-renowned scholars. Each scholar will discuss his or her work and place it in a broader scholarly context. Lectures will be followed by small group discussions.

## 2012 topics and lecturers

- Cultural psychology: Accomplishments so far and future directions
   Hazel Rose Markus, Davis-Brack Professor in the Behavioral Sciences, Stanford University
- Cultural neuroscience: What is it and why do we want it?
   Shinobu Kitayama, Robert B. Zajonc Collegiate Professor of Psychology, University of Michigan
- Culture and cognition
   Richard E. Nisbett, Theodore M. Newcomb
   Distinguished University Professor, University of Michigan
- Epigenetics
   Stephen J. Suomi, Senior Investigator, National Institute of Mental Health
- Neuroimaging Methods
   Chandra Sripada, Assistant Professor,
   University of Michigan
- Electrophysiological Methods William J. Gehring, Arthur F. Thurnau Professor of Psychology, University of Michigan
- Culture and neural representation of the self Shihui Han, Professor, Peking University
- Social neuroscience of perceiving ingroups and outgroups
   Nalini Ambady, Professor, Stanford University

Great pleasure to listen to the leading researchers talk about their own research... It helped me to draw a whole picture of this growing research area.

**Xiaoming Ma** (2011 participant), University of Wisconsin-Madison and Peking University

I was so impressed by what I learned about this new and exciting field that I am now embarking on several cross-cultural projects.

**Shai Danziger** (2011 participant), Professor of Marketing, Tel-Aviv University, Israel

It gave me lots of reworking and additional researching to do.

**Alexandra Schulz** (2011 participant), Ludwig-Maximilians University, Munich
